

Discussion

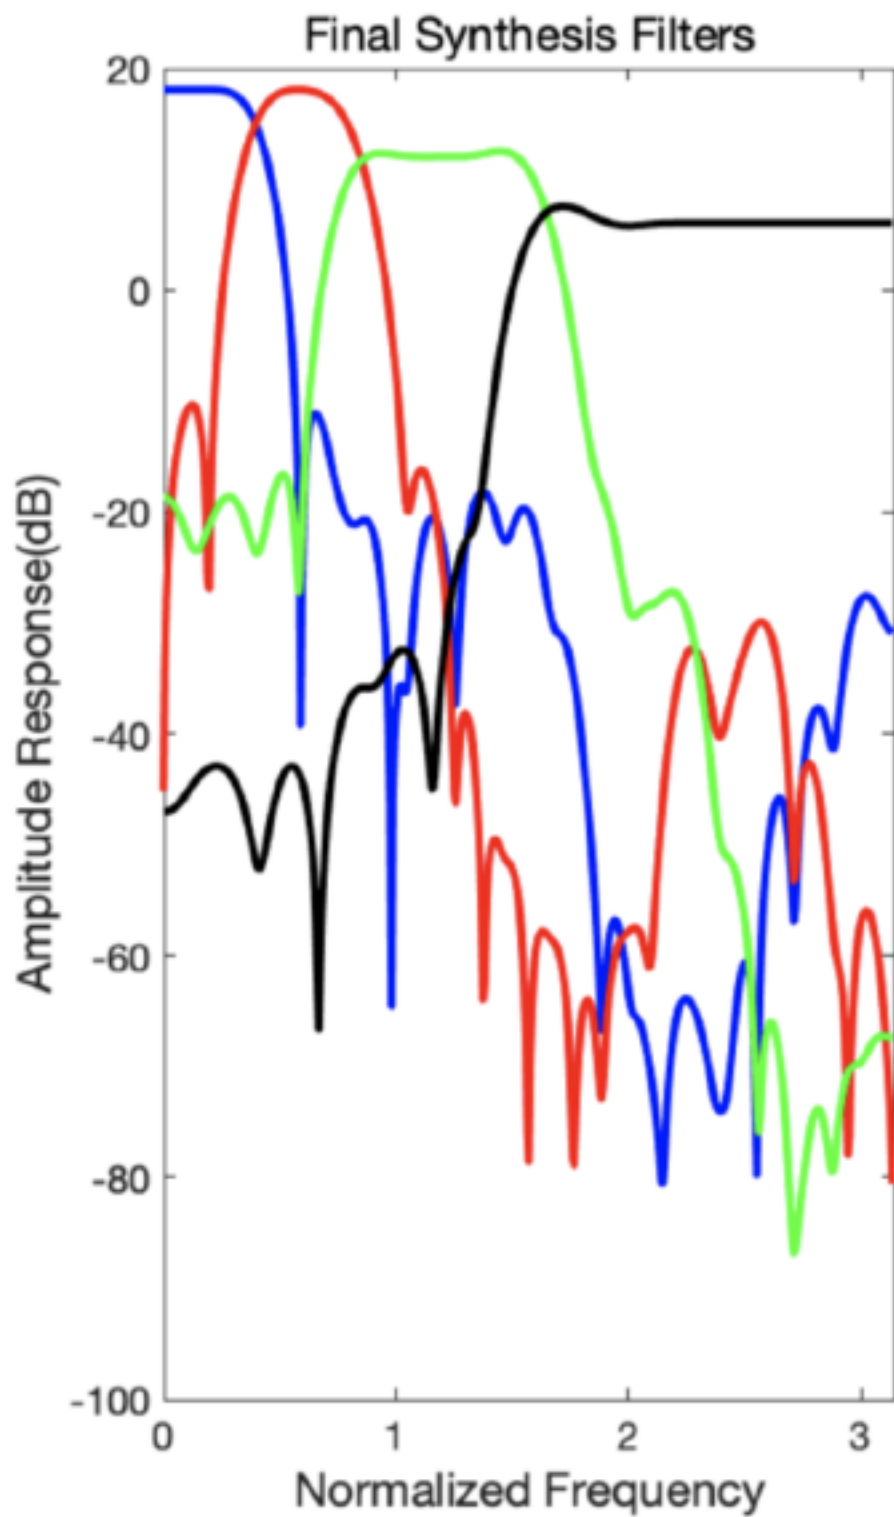

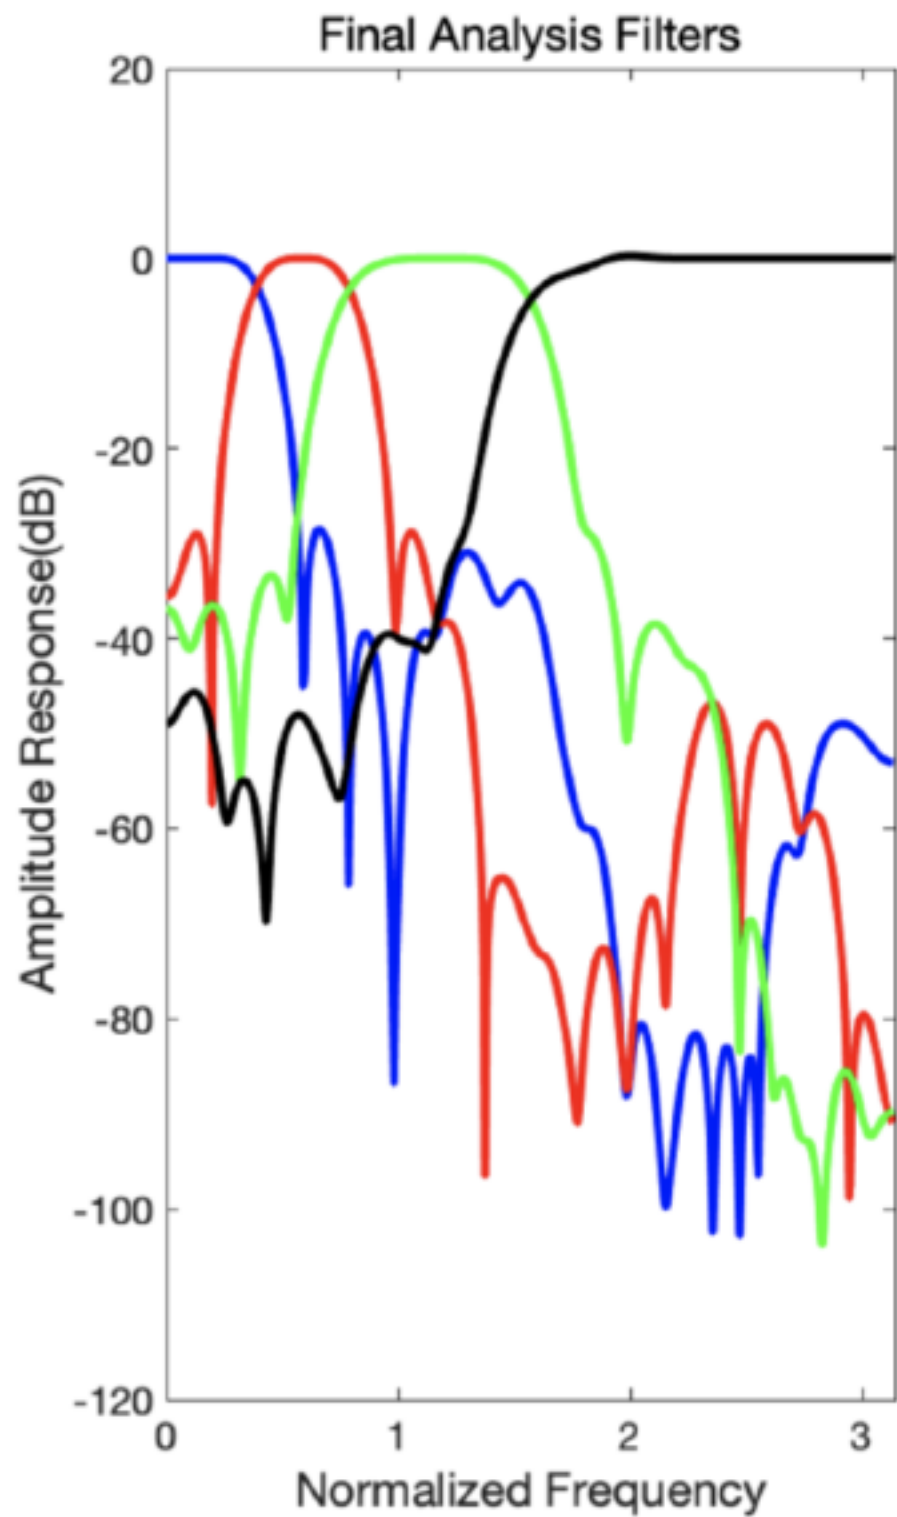

• How about using subband feature in time domain?

• How about non-uniform subband operations?

• How to integrate the advantages of time and frequency modeling?

• Any other good ways to estimate unbiased IRM?

Discussion

- How about using subband feature in time domain?
- How about non-uniform subband operations?
- How to integrate the advantages of time and frequency modeling?
- Any other good ways to estimate unbounded cIRM?
- ...

Speech Enhancement Topics

Overview

1. A real-time low-resource SE model (<50M Flops, <2MB) for 44.1kHz speech.
 - For Lark meetings usage.
 - Main efforts is on bad cases repairments.
2. A speech enhancement model build with weakly labeled data from AudioSet.
 - Only contribute to the experiment parts. But the idea is worth sharing.
